Jacob Flores

Technical Tools & Programming Language Experience
Tools: Microsoft Office, VS Code, ArcGIS Pro, ArcGIS Online, ArcGIS Field Maps, ArcGIS StoryMaps, MySQL
Languages: Python, Java, C#, R, JavaScript, SQL

Education
Texas A&M University, College Station, Texas GPA: 3.148
Bachelor of Science in Geographic Information Science and Technology
Undergraduate: August 2021 - December 2026
Relevant courses: Introduction to Human Geography, Cartography and Visualization, Statistical Methods, Data Analysis in Geography, GNSS in the Geosciences, Principles of GIS, Advanced GIS, Geodatabases, Remote Sensing in Geosciences and WebGIS

Research Project Experience:

U.S. Rising Temperatures Thematic Map (Fall 2023)

- Description: Researched the rising temperatures over the years in the United States and compared the temperature rise to its rate of change.
- Role: Created a thematic map project to display multiple layers featuring the temperature increase as well as the rate of change to show the gradual changes in temperature for the United States and displayed the information found through ArcGIS StoryMaps of the information found about the temperature increase throughout the semester.

Capacity of Bike Racks Across Texas A&M University Campus (Spring 2025)

- Description: Investigated bike racks across different parts of the Texas A&M campus to find bike racks that were overcrowded and least crowded using combined group data across all parts of the Texas A&M University campuses including the North, Central, West, and the apartments.
- Role: Recorded bike rack data from North Campus of Texas A&M University at day & night using the ArcGIS Field Maps App with accuracy coordinates using real GPS coordinates plus wrote the Methods portion of the project poster explaining the process of data collection and data sharing.

Texas Coastal Hurricane Risk (Fall 2025)

- Description: Identified the coastal counties of Texas who are at high risk for flooding, infrastructure capacity, and counties that lack emergency support to find out which counties need the most assistance with hurricane prevention and what could be done to provide extra safety before the next hurricane season arrives towards the state of Texas.
- Role: Provided the leader role & research data sources found through ArcGIS Online, cleaned and filtered data for Texas counties, and created map layers for risk assessment and infrastructure inside of ArcGIS Pro to be used for the geodatabase for our geodatabase part of the project.

U.S. Housing Crisis (Spring 2026)

- Description: Predicted 2034 data for Texas Housing Prices and Values using historical data from 2014 and 2024 to provide information for future homeowners about the best counties for living in the state of Texas.
- Role: Designed maps of Texas County Housing Values for 2014, 2024, & 2034 using HTML & CSS for map design & interactive map features to switch years and calculated predicted exponential values for 2034 through Google Sheets using the compound annual growth rate formula.
